LOGOSCREEN fd

JUMO

JUMO *LOGOSCREEN fd*

Secure Data Management and FDA-Compliant Measured Data Recording

Brief description

The LOGOSCREEN fd by JUMO is a paperless recorder for the electronic recording, archiving, and evaluation of process data that fully meets FDA requirements according to 21 CFR Part 11. The LOGOSCREEN fd has a maximum of 18 universal measurement inputs and is especially designed for the recording of security-related data. Up to 50 different users can log in to the device with their personal password and provide their respective signature if needed.
Efficient PC programs are available to evaluate archived data and to configure the LOGO-SCREEN fd.

Type 706585/...

Type 706585/..., 444
(Stainless steel front ⟨Ex⟩)

Block structure

Inputs/Outputs

0 to 18 analog inputs max.
0 to 24 binary inputs/outputs max.

(maximum of 3 module slots,
can be fitted with 6 analog inputs
or 3 analog inputs
and 8 binary inputs/outputs)

Inputs via interface

additionally
up to 24 analog inputs and
up to 24 binary inputs

Relay outputs

1 relay (standard)
additionally
6 relays (option)

Display/Operation

Display
5.5" TFT color display,
320 × 240 pixels,
256 colors

Operation
rotary knob or touchpad
(left, right, press)

JUMO LOGOSCREEN fd

Power supply

AC 100 to 240 V +10/-15 %,
48 to 63 Hz
AC/DC 20 to 30 V, 48 to 63Hz (ELV)

Interface

as standard
1× Ethernet 10/100 Mbits/sec
4× USB interfaces
1× RS232/RS485
1× RS232 (barcode reader)
option:
1× PROFIBUS-DP

Meas. data memory

internal memory
256 Mbytes

external memory
CompactFlash card and
USB memory stick

Internal channels

18× math channels

18× logic channels

27× counters/integrators

Software

Setup program,

PCA3000, PCC,

PCS, PCAT

Key features

- Conforms to FDA CFR Part 11
- Up to 50 users
- Electronic signature
- Comfortable security management
- Easy operation by control knob or touchpad
- Measurement data storage on CompactFlash memory card or USB memory stick
- Automatic read-out of data through the PCA Communications Software (PCC)
- Integrated web server
- Simultaneous recording of up to 3 batch reports
- Batch control (start, stop, texts) through barcode reader
- Modbus master function
- ATEX approval with stainless steel front

  ⟨Ex⟩ II 2G Ex px IIC
  ⟨Ex⟩ II 2D Ex pD 21 IP65

[a] Programmable reaction of device, e.g. triggering alarm

Binary inputs/outputs (option)

Input or output	configurable as input or output
Number	8, 16 or 24, depending on the device version, to DIN VDE 0411, Part 500; max. 25 Hz, max. 32 V
Input • level • counting frequency	 logic "0": -3 to +5 V (input current max. ±1 mA), logic "1": 12 to 30 V (2.5 mA ≤ input current ≤ 5 mA) 8 Hz
High-speed input • task • counting frequency	the first two binary inputs of each module (B1, B2, B9, B10, B17, B18), if the module is not fitted with relays or 6 analog inputs count function, e.g. for flow measurement 10 kHz
Output • type • level • sampling cycle	 open-collector output, switches relative to positive voltage logic "0": transistor is inhibited (max. permissible voltage across switching transistor 30 V, max. leakage current 0.1 mA) logic "1": transistor is switched on (max. voltage across switching transistor 1.6 V, max. current 50 mA) at least 1 sec (1 Hz)

Outputs

1 relay (ex-factory)	changeover (SPDT), 3 A, 230 V AC[a]
6 relays (option)	changeover (SPDT), 3 A, 230 V AC[a, b]

[a] With resistive load.
[b] It is not permissible to mix SELV circuits and supply circuits.

Interfaces

RS232/RS485 (connector 7)	Qty. 1, switchable between RS232 and RS485
• protocol	Modbus master, Modbus slave and barcode reader
• baud rate	9600, 19200, 38400
• modem	can be connected
• connector	SUB-D
• external inputs	via the Modbus master/slave function, 24 analog and 24 binary

RS232 for barcode reader (connector 2)	Qty. 1
• protocol	Modbus master, Modbus slave and barcode reader
• baud rate	9600, 19200, 38400
• connector	SUB-D
• external inputs	via the Modbus master/slave function, 24 analog and 24 binary
Ethernet (connector 6)	
• quantity	max. 1
• protocols	TCP, IP, HTTP, DHCP, SMTP, ModbusTCP
• baud rate	10 Mbits/sec, 100 Mbits/sec
• connector	RJ45
• data format	HTML
USB host (connector 5)	
• quantity	2 (or 1 with stainless steel front), connector 5 and front connector (not with stainless steel front); no parallel operation
• use	for connecting a memory stick
• max. current	100 mA
USB device (connector 15)	
• quantity	2 (or 1 with stainless steel front), connector 15 and front connector (not with stainless steel front); no parallel operation)
• use	for connecting to the (master) computer

Screen

Resolution/size	320 × 240 pixels/5.5"
Type/number of colors	TFT color screen/256 colors
Screen refresh rate	> 150 Hz
Brightness setting	adjustable on instrument
Screen saver (switch-off)	through waiting time or control signal

Electrical data

Supply voltage (switch-mode PSU)	AC 100 to 240 V +10/-15 %, 48 to 63 Hz or AC/DC 20 to 30 V, 48 to 63 Hz (ELV)
Electrical safety	to EN 61010, Part 1, August 2002 overvoltage category II, pollution degree 2
Protection class I	terminal for PE conductor
Test voltages (type test)	
• mains supply circuit to meas. circuit	with AC supply: 2.3 kV/50 Hz, 1 min, with AC/DC supply: 2.3 kV/50 Hz, 1 min
• mains supply circuit to housing (protective conductor)	with AC supply: 2.3 kV/50 Hz, 1 min, with AC/DC supply: 2.3 kV/50 Hz, 1 min
• measuring current circuits to measuring current circuit and housing	500 V/50 Hz, 1 min
• electrical isolation between analog inputs	up to 30 V AC and 50 V DC
Supply voltage error	< 0.1 % of range span
Power consumption	approx. 40 VA
Data backup	CompactFlash memory card
Electrical connection	
• mains supply and relays	at rear through pluggable screw terminals, 5.08 mm raster, max. conductor cross-section ≤ 2.5 mm^2 or 2× 1.5 mm^2 with ferrules
• analog and binary inputs	at rear through pluggable screw terminals, 3.81 mm raster, max. conductor cross-section ≤ 1.5 mm^2

Environmental influences

Ambient temperature range	0 to +50 °C
Ambient temperature effect	0.03 %/°C
Storage temperature range	-20 to +60 °C
Climatic conditions	≤ 75 % relative humidity, no condensation
EMC	EN 61326-1
• interference emission	Class A - only for industrial use -
• immunity to interference	to industrial requirements

Housing

Housing front	zinc die-casting, optionally in stainless steel (extra code)
Housing type	housing for flush-panel mounting to IEC 61554, in stainless steel
Bezel size	144 mm × 144 mm to IEC 61554
Depth behind panel	193 mm (incl. terminals)
Panel cut-out	$138^{+1.0}$ mm × $138^{+1.0}$ mm to IEC 61554
Panel thickness	2 to 40 mm
Housing mounting	in panel to DIN 43834
Operating position	unrestricted, but taking into account the viewing angle of the screen, horizontally ±65°, vertically +40° to -65°
Enclosure protection	to EN 60529 Category 2, front IP65, rear IP20
Weight	approx. 3.5 kg

Approvals/marks of conformity

Mark of conformity	Testing laboratory	Certificates / certification numbers	Test basis	valid for
c UL us	Underwriters Laboratories	E 201387	UL 61010-1 CAN/CSA-C22.2 No. 61010-1	the flush-mounted instrument; not in conjunction with extra code 350
II 2G Ex px IIC II 2D Ex pD 21 IP65	electrosuisse	SEV 08 ATEX 0155 U	EN 1127-1:2007 EN 60079-0:2006 EN 60079-2:2007 EN 61241-0:2006 EN 61241-4:2006	the flush-mounted instrument; only in conjunction with extra code 444 and without extra code 350

Control knob, to rotate and press.

CompactFlash memory card and USB interfaces behind housing door.

Instrument description

Hardware

The paperless recorder is built to a modular design. The basic type consists of a PSU board (incl. relays) and a CPU board (incl. Ethernet and RS232/RS485 interfaces and an RS232 interface for barcode reader and USB interface connection).
Module slots 1, 2 and 3 can be fitted with input modules, each with 6 analog inputs or 3 analog inputs and 8 binary inputs/outputs. Alternatively, module slot 3 can be fitted with a relay module that has 6 relays.
Optionally, the PSU board can be equipped with a PROFIBUS-DP interface.

Data recording

Measurements are acquired continuously in a 125 msec sampling cycle. Based on these measurements, reports are compiled and limits checked.
The measurements are transferred to the main memory of the instrument, according to the programmable storage cycle and stored value (maximum, minimum, average, min&max, instantaneous value or economy mode).
The paperless recorder saves the data in groups, and an input can be assigned to several groups (maximum 9).

Main memory (SRAM)

The data stored in the SRAM are regularly copied to the internal memory in 20 kbyte blocks.

Internal memory

When a block in the main memory has been filled, it is copied to the internal memory. The internal memory has a capacity of max. 256 Mbytes.

Every write action is monitored, so that any errors in saving the data can be immediately identified.
The instrument monitors the capacity of the internal memory and activates one of the "memory alarm" signals when the capacity falls below the configurable residual capacity level. These signals can be used, for instance, to operate the alarm relay.
The memory is written as a ring memory, i. e. when the memory is full, the oldest data are automatically overwritten by the new data.
Data from the internal memory can be shown as a history presentation on the recorder. The size of the history memory can be configured.

Data transfer to the PC

Data transfer from the paperless recorder to a PC is made by means of the external CompactFlash memory card (not available with stainless steel front), the USB memory stick or via one of the interfaces (USB device, RS232, RS485, Ethernet).

Data security

The data are stored in coded form in a proprietary format. This ensures a high level of data security.
If the paperless recorder is disconnected from the supply, then:
- RAM and clock time are buffered by a lithium battery (ex-factory) $\geq$ 10 years or with a storage capacitor $\geq$ 2 days (ambient temperature -40 to +45 °C),
- measurement and configuration data in the internal memory will not be lost.

Recording duration

Depending on the configuration of the instrument, the duration of the recording can vary over a considerable range (from a few days up to several months).

Report

For each channel of a group, a report (maximum/minimum/average or integrator) can be run over defined periods.

Batch reports

Up to three batch reports can be created simultaneously in the recorder. The measurement data, start, end and duration of each batch can be displayed together with a batch counter and freely definable texts, both on the recorder and within the PC Evaluation Software PCA3000.
On request, a barcode reader can be used to start batches and read in batch texts.

Limit checkline
changeover of operating mode

Over/underlimit conditions trigger alarms. An alarm can be used, for instance, as a control signal for changing over the operating mode. The storage cycle and stored value can be configured separately for all three operating modes.
With the help of the alarm delay function, brief occurrences or over/underlimit conditions can be filtered out, with the result that no alarm is generated.

Normal operation

If the instrument is **not** in timed or event operation, normal operation is active.

Event operation

Event operation is activated/deactivated by a control signal (binary input, group/combination alarm, ...). As long as the control signal is active, the instrument is in event operation.

Timed operation

Timed operation is active on a daily basis within a programmable time period. The operating modes have different priorities.

Counters/integrators

27 additional internal channels are available for use as counters, integrators, operating time counters or for flow measurements.
These counters are controlled through the binary inputs, the alarms, or via the logic channels. The analog channels can be used for the integrators.
The numerical indication is shown in a separate window, with a maximum of 9 digits. The acquisition period can be selected as: periodic, daily, weekly, monthly, yearly as well as external, total (overall count) or daily from ... to.
A maximum of 6 binary inputs are available as high-speed counters with a 10 kHz sampling cycle rate.

Math/logic module
(extra code)

The module for math and logic (18 channels each) enables, for instance, the combination of analog channels with one another, and also the combination of analog channels with counters and binary inputs. The operators available for formulae are: +, -, *, /, SQRT(), MIN(), MAX(), SIN(), COS(), TAN(), **, EXP(), ABS(), INT(), FRC(), LOG(), LN(), humidity, moving average or !, &, |, ^, as well as (and).
The math and logic module can only be configured through the setup program.

Operation and configuration

On the recorder

The instrument is configured from the control knob (or with stainless steel front, from the touchpad) on the front panel under menu guidance.

Shift current menu position (cursor) to the left or upwards.

Shift current menu position (cursor) to the right or downwards.

When the control knob is pressed, the current function is executed.
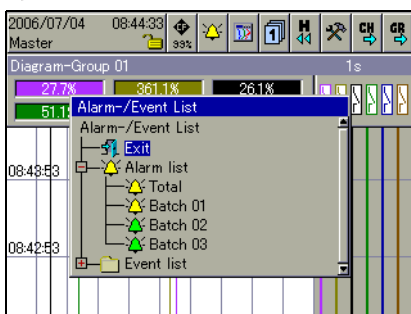

Example:

Rotate control knob to the left.

Press control knob.

Result: The menu for the alarm and event list is called up.

Rotate control knob to the left.

Press control knob.

Result: The menu for the alarm and event list is closed again.

Through the setup program

As an alternative to the configuration from the control knob on the recorder, the instrument can also be configured through the setup program.

Communication between the setup program and the paperless recorder is made through the:

- USB device interface
- serial interface
- Ethernet interface
- CompactFlash memory card or
- USB memory stick
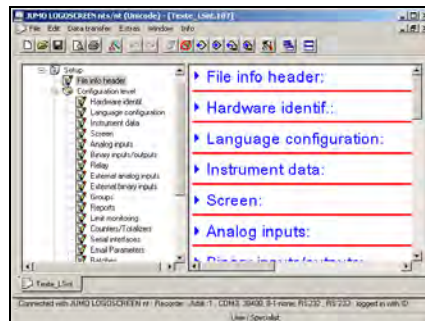

The configuration data can be archived on a data storage medium and output to the printer.

Operating language

Two languages (see order details) are integrated in the instrument ex-factory. The setup program is used to exchange the operator language.

The languages available at the moment are: English, French, German, Russian, Japanese, Chinese, Italian, Romanian, Czech, Hungarian, Polish and Greek.

Other language versions (with Unicode capability) can be created.

Web server

The web server is integrated in the paperless recorder as standard. Four different modes of presentation are available:

- online visualization
- three freely programmable HTML pages
- current batch reports
- 4-way view (1 to 4 recorders or different visualizations)
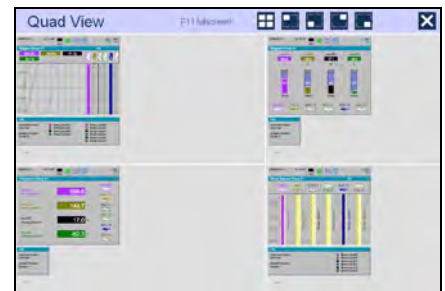

On the PC side, the web server can be addressed with the (Microsoft®) Internet Explorer. For visualizing graphics, an SVG Viewer (from Adobe®, for instance) must be installed on the PC in addition to the Internet Explorer.

Process images (editor)

The setup program can create process images and transfer them to the paperless recorder for display. Up to 25 objects (images, analog channels, binary channels, texts, ...) can be used in a process image.
One process image is integrated in the paperless recorder ex-factory.

Data Sheet 706585   **Page 9/21**

# Visualization on the instrument

Operator level
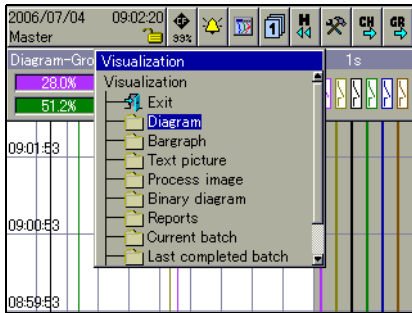

- Selection of visualization

Vertical diagram

- Recorder chart presentation of analog and binary channels
- Display of scaling and limit markers of a channel (can be switched on/off)
- Numerical display of current analog channels
Bar graph presentation

- Bar graph presentation of analog channels
- On/Off presentation of binary channels
- Display of current analog channels with scaling and limit markers
- Color change of bar graph to red when limits are infringed

Numerical presentation
- Large numerical presentation of analog channels, including the channel name and description
- Each analog channel can be switched to the foreground
- On/Off presentation of binary channels

Numerical 1-channel presentation

- Clear presentation of an analog channel
- An analog input is shown simultaneously as a bar graph and a number
- Display of channel name and description
- Display of scaling and limit markers

Process image
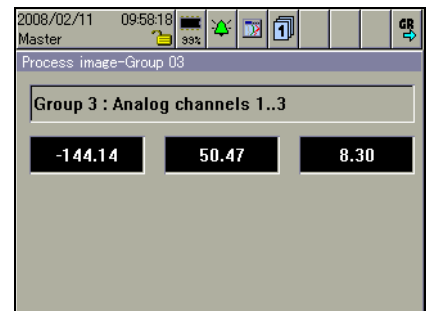

- Freely configurable presentation (through the setup program) of analog and binary signals with background pictures
- One process image for each group

Binary presentation
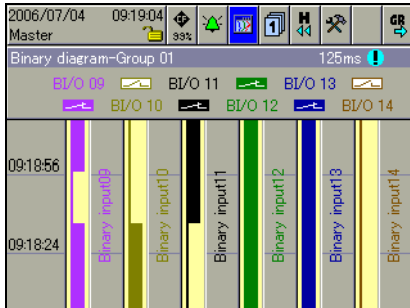

- On/Off presentation of binary channels

Report
- Display of different reports for the analog channels of a group
- Details of minimum, maximum, average/ integral values and time period
- Display of the previous report

Batch reports
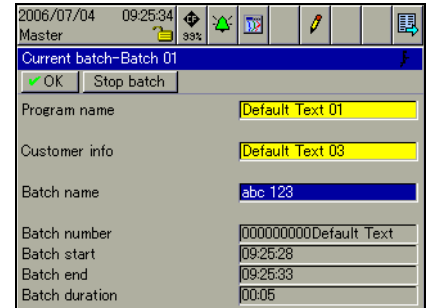

- 3 batches documented simultaneously
- Changeover between current and completed batch reports
- Electronic signature is possible
- Batch texts via interface and barcode reader, among others

Counter/integrator presentation

- Presentation of up to 27 counters or integrators
- Changeover between individual and overall display
- Display of the current and the most recently completed count

Group selection
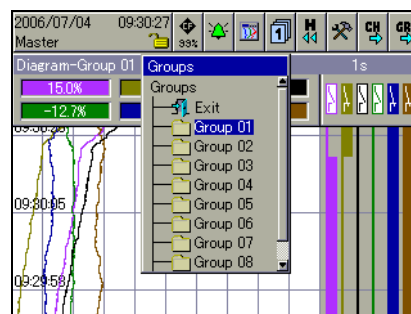

- Up to 9 groups are configurable
- Up to 6 analog and 6 binary channels can be shown for each group
- Measurement signals can be used in several groups

History presentation
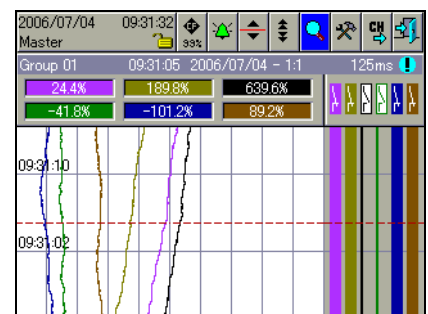

- All stored measurement data are shown as curves at different zoom levels
- Display of scaling and limit markers of a channel
- Numerical display of the measurements of the analog channels at the cursor position
- Shifting of the visible section within the stored measurement data

## Presentation of alarm lists

- Display of current alarms
- For the instrument as a whole or batch-related
- Up to 150 entries visible on the recorder
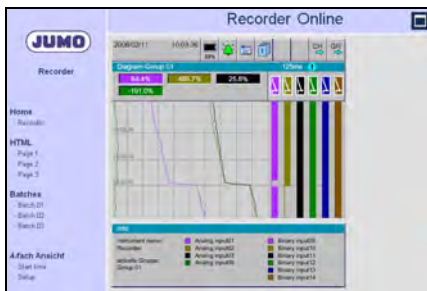

Presentation of event lists

- Display and storage of events and alarms
- For the instrument as a whole or batch-related
- Up to 150 entries visible on the recorder

Configuration

- Configuration on the recorder itself, by rotating and pressing the control knob
- Configuration through the setup program

Visualization through the web browser

- Online visualization of a recorder
- Selection of (max.) three customized HTML pages (created on request)

- Navigation through the different recorder visualizations (curves, bar graph, text, process, ...)

- Max. four recorders or four different visualizations simultaneously

Order details

	(1)	Basic type
706585		Paperless recorder with Ethernet, USB and RS232/RS485 interfaces and RS232 interface (to connect a barcode reader) and one relay
	(2)	**Software**
0		No software package
1		With software package (setup program incl. USB cable, PCA3000, PCC, PCS, PCAT)
	(3)	**Language for instrument texts**
8		Factory setting (German/English)
9		Set to customer specification
	(4)	**Module slot 1**
0		not used
2		3 analog inputs and 8 binary inputs/outputs
3		6 analog inputs
	(5)	**Module slot 2**
0		not used
2		3 analog inputs and 8 binary inputs/outputs
3		6 analog inputs
	(6)	**Module slot 3**
0		not used
1		6 relay outputs
2		3 analog inputs and 8 binary inputs/outputs
3		6 analog inputs
	(7)	**Supply**
25		AC/DC 20 to 30 V, 48 to 63 Hz
33		AC 100 to 240 V +10/-15 %, 48 to 63 Hz
	(8)	**Extra codes memory**
020		Lithium battery for memory buffering (ex-factory)
021		Storage capacitor
	(9)	**Extra codes**
.		not used
260		Math and logic module
	(10)	**Extra codes housing**
.		not used
350		Universal carrying case TG-35[a]
444		Stainless steel front with touchpad ⟨Ex⟩
	(11)	**Extra codes**
.		without extra codes
267		PROFIBUS-DP interface

[a] This extra code is available in combination with voltage supply AC 100 to 240 V, not with low supply voltage. UL and ATEX approvals not applicable. The protection type in the carrying case corresponds to IP20, outside IP20D.
